

## **Research Institute for Sustainable Humanosphere, Kyoto University seek applicants for “Mission Research Fellows” from the public**

The Research Institute for Sustainable Humanosphere (RISH), Kyoto University is seeking applicants for the mission research fellows, as described below.

As a Joint Use/Research Center in the field of Humanosphere Sciences, the Institute defines, from a global viewpoint, the regions and spheres vital to human existence— involving “outer space”, “the atmosphere”, “the forest-sphere” and “the human living environment”—as the humanosphere, and strives to explore and develop innovative interdisciplinary fields that provide “scientific diagnoses and technological solutions” regarding this humanosphere.

Mission research fellows are young researchers who belong to Research Institute for Sustainable Humanosphere and work on exploratory/fusion research projects relating to the five missions with the aim of establishing Humanosphere Sciences.

Outlined below are the five new missions set for expanding new interdisciplinary fields of the humanosphere through amalgamation of the four spheres—“outer space”, “the atmosphere”, “the forest-sphere” and “the human living environment”.

### **Mission 1: Environmental Diagnosis and Regulation of Circulatory Function**

To predict environmental changes, such as global warming and extreme weather events, Mission 1 diagnoses atmospheric conditions by highly sensitive radars and satellite measurements. This work elucidates material transport and ex-changes mechanisms between the atmosphere and the biosphere, including the pedosphere. To establish a fossil fuel-independent, biomass-based sustainable energy production and utilization system, this mission views the humanosphere from a material cycling perspective. Research projects include investigating the biological functions of plants and microbes in biomass production and sustainable and circular processes such as metabolic engineering.

### **Mission 2: Advanced Development of Science and Technology Towards a Solar Energy Society**

Mission 2 aims to develop technology for advanced solar energy conversion by means of microwave technology, biotechnology, and chemical reactions. We study the direct conversion of solar energy into electric and electromagnetic wave energies, as well as the indirect conversion of solar energy into highly functional materials via wood

biomass, a carbon fixation product of photosynthesis. Mission 2 intensively focuses on the conversion of solar energy to highly functional materials, which includes not only the basic humanosphere science but also how total systems are implemented in the humanosphere.

### **Mission 3: Sustainable Space Environments for Humankind**

The aim of Mission 3 is to advance research for the understanding of space and atmospheric environments and their interactions with the human living environment-sphere and the forest-sphere by using satellites, space stations, sounding rockets, ground-based radars, and computer simulations. This mission also aims to respond to the societal demand for the utilization of sustainable space environments by deepening our understanding of the fluctuations in radiation belts and geomagnetic storms due to solar flares and by proposing measures to tackle threats from space, including potentially hazardous space debris and asteroids. For example, we study an engineering approach to prevent asteroid impacts on the Earth, as these events cause severe damage. This mission not only deals with understanding and utilizing space environments, but it also emphasizes the maintenance and improvement of space environments for daily human life, as well as interactions with the atmosphere, the forest-sphere, and the human living environment-sphere.

### **Mission 4: Development and Utilization of Wood-based Sustainable Materials in Harmony with the Human Living Environment**

Mission 4 aims to develop a sustainable, renewable and cooperative human living environment by constructing a novel social system based on wood-based resources. To create harmony between nature and human activities, this mission focuses on human habitation by examining biologically based and sustainable materials, the architectural function of structures and the human habitability of these structures. Technologies with low environmental impacts are possible if the structure and function of these bio-resources is well understood. Our research is directed towards the development of these technologies throughout the carbon life cycle, including the manufacturing, modification, use, disposal, and recycling of wood-based materials. The principle of this mission is to unify state of the art technologies in engineering, agriculture, biology and anthropology through wood and material sciences. This mission is designed with creativity in mind and will be conducted through the development of novel ideas and thinking. Nonetheless, ancient knowledge and techniques will still play an important role in this mission to uphold a safe and pleasant environment on earth.

### **Mission 5: Quality of the Future Humanosphere**

Rapid expansion of human industrial exploitation has brought drastic changes to

various aspects of the humanosphere, which threatens human health and the circumstances necessary for a safe and secure life. The purpose of Mission 5 is to take effective measures, based on the achievements of Missions 1 to 4, to harmonize human health and environmental issues, establish a society independent from fossil resources, maintain a space infrastructure that supports the human living environment, and contribute to society by creating a renewable wood-based civilization. In this way, Mission 5 aims to improve the quality of the humanosphere in the future. This mission is based on collaborative research activities carried out from 2011 to 2015 as “Frontier Research on the Sustainable Humanosphere”, which is an institute-driven top-down project studying the five main themes for human life by means of humanosphere sciences.

For details, see the RISH website <http://www.rish.kyoto-u.ac.jp/?lang=en>

Application Guidelines for Mission Research Fellows, Research Institute for Sustainable Humanosphere, Kyoto University

- Positions available: Mission research fellows:

Number of positions: a few positions (employment will start on April 1<sup>st</sup>, 2024)

- Location: Uji Campus, Kyoto University, Gokasho, Uji City, Kyoto

- Application period: December 7<sup>th</sup>, 2023 to January 19<sup>th</sup>, 2024 (17:00 JST)

- Qualification: PhD holders or those who are definitely scheduled to obtain a doctoral degree by April 1<sup>st</sup>, 2024, and have no full-time job.

- Term of office: April 1<sup>st</sup>, 2024 to March 31<sup>st</sup>, 2025 (Although the contract ends on March 31<sup>st</sup>, 2025 in principal, it can be renewable if the post is secured based on evaluation of the research results. Up to 2 years since the initial date of hire.)

※ We may retract the job offer, if the successful candidate, for whatever reason, is not able to start working at Kyoto University no later than three months after the start day stated in the offer letter.

- Probation period: none

**\* Applicant must contact your host-researcher in RISH about your research project in advance of application.**

• **Application and required documents:**

- (a) Resume (with your photo): applicant's name, date of birth, age, education, work experience, e-mail address etc.
- (b) Specialized field, related mission. Give one project title you are proposing.
- (c) List of research achievements (original papers, books, patents, others) and a maximum 3 reprints or copies of major papers
- (d) Summary of past research and results (in approx. 800 words)
- (e) State of purpose (in approx. 400 words)
- (f) Plans for the future research (write specifically in approx. 1600 words)
- (g) Names and contacts of references (2 persons) regarding the applicant's research and personality
- (h) Name of host-researcher (in RISH)

• **How to apply**

Submit application documents to:

Administrative Office, Research Institute for Sustainable Humanosphere, Kyoto University Gokasho, Uji City, Kyoto 611-0011, JAPAN

(Write "Application documents for mission research fellow enclosed" in red on the front of the envelope. If using postal mail, send it by simple registered mail.)

- **Contact:** Administrative Office, Research Institute for Sustainable Humanosphere  
(uji.rish-jimu@mail2.adm.kyoto-u.ac.jp)

• **Employment conditions:**

- (a) Status: Hourly staff (Research Staff)
- (b) Payment: 1,900-3,900 yen per hour
- (c) Work schedule: 20-30 hours per week, 3-5 days per week (excluding Saturdays, Sundays, national holidays, year-end and New Year holidays, and Foundation Day). No overtime working. Work schedules are subject to negotiation.
- (d) Social insurance: Health insurance, employee's pension insurance, employment insurance, industrial accident compensation insurance
- (e) Allowance : Commuting allowance will be paid in accordance with the Kyoto University regulations.  
(No other allowances, such as bonus, retirement benefits will not be provided.)

- Other:

The application documents you submit will be used for recruitment and selection purposes only.

These documents will not be disclosed, transferred or lent to any third parties without due reasons.

Please note that the application documents will not be returned to you.

Smoking is prohibited in any indoor and outdoor areas of the Kyoto University campus, except for designated smoking areas.
