(2) The University of Adelaide, Adelaide, 5005, SA, AUSTRALIA

(3) Australian Government Bureau of Meteorology, Melbourne, VIC, 3001, AUSTRALIA

The first profiler of the new Australian Wind Profiler Network was installed in mid-2011, and the last (of nine) in February 2017. In this presentation, we describe the two types of radar in the network, the network itself, and summarise its overall operating characteristics over the period it has been operating . Its impact on NWP and forecasting is described in a companion paper.
